Working with RoboComb+ is simple

1

Select the desired test

2

Bring the plate to room temperature by:

1. Leaving out of refrigeration for 60 minutes or
2. Using the built-in plate warmer for 10 minutes

3

Load the sample into the kit's plate and place the plate on the plate base of the RoboComb+

4

Load the tooth, teeth or full comb on the comb holder

1-12 teeth can be tested simultaneously

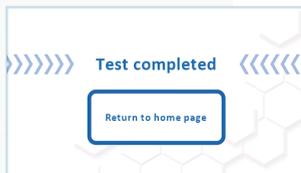

5

Let the test run

6

Read the results

Designed for Biogal's antibody tests
